EVEREST TECHNOCAST

Deep Intelligence Report

https://www.everesttechnocast.com/

Executive Summary

Everest Technocast is a prominent player in the manufacturing industry, specializing in the production of casting components for the automotive sector. The company operates under a B2B business model, catering primarily to original equipment manufacturers (OEMs), original equipment suppliers (OESs), automotive engineers, procurement managers, and industrial buyers. With a diverse range of sophisticated manufacturing capabilities, Everest Technocast emphasizes quality and precision in its offerings, ensuring that its products meet the rigorous demands of the automotive market.

Founded over 15 years ago, Everest Technocast has built a reputation for excellence in manufacturing, driven by a vibrant workforce of highly qualified professionals. The company has established a robust Quality Management System that adheres to international standards, including ISO 9000:2015 and IATF 16949:2016. This commitment to quality is further reinforced by advanced manufacturing technologies and quality control measures, such as the use of Coordinate Measuring Machines (CMM) and CONTOURE Magnetic Particle Inspection (MPI). Everest Technocast's focus on equality and customer-centric decision-making sets it apart in a competitive landscape, allowing it to maintain strong relationships with over 160 satisfied clients.

Positioned as a leader in the automotive casting components market in India, Everest Technocast differentiates itself through its unwavering commitment to product excellence and flexibility in manufacturing. The company's unique selling propositions, including its IATF 16949 certification and extensive experience, enable it to adapt to variable requirements while consistently delivering high-quality products. By prioritizing advanced product development and maintaining a customer-first approach, Everest Technocast continues to solidify its standing as a trusted partner in the automotive manufacturing sector.

Business Identity

Official Name: EVEREST TECHNOCAST

Industry: Manufacturing

Sub-Industry: Casting Components for Automotive

Business Model: B2B manufacturing

Product Catalog

Brake Drum

Category: Brake Drum

Brake drums used in automobiles for hydraulic braking systems.

Key Features:
- Highly efficient
- Long lasting
- Corrosion resistant
- Exclusive finishing
- Easy installation

Technical Specifications:

Material	Grey Cast Iron

Use Cases:
- Used in automotive braking systems to provide reliable hydraulic brakes.

Brake Drum Summary:

A brake drum is a crucial component in the braking system of automobiles, specifically designed for hydraulic brakes. It works by creating friction with brake shoes to slow down or stop the vehicle when the driver presses the brake pedal. This reliable mechanism ensures that your car can safely come to a halt when needed.

Key benefits of our brake drums include:
*- **Highly efficient**: They provide strong stopping power with minimal effort.*
*- **Long-lasting**: Made from durable grey cast iron, these drums are built to withstand wear and tear.*
*- **Corrosion resistant**: They resist rust and damage from the elements, ensuring consistent performance.*
*- **Exclusive finishing**: This enhances both durability and appearance.*
*- **Easy installation**: Designed for straightforward setup, making replacement hassle-free.*

In summary, our brake drums enhance vehicle safety and performance, ensuring that you can trust your brakes in any driving situation.

Brake Disc

Category: Brake Disc

Brake discs used to slow or stop wheel rotation.

Key Features:
- Utilizes less abrasive material and lubricants

Technical Specifications:

Material	Grey Cast Iron

Use Cases:
- Used in automotive braking systems to slow or stop the rotation of wheels.

Brake Disc Summary:

A brake disc is a crucial component in automotive braking systems that helps slow down or stop the rotation of the vehicle's wheels. Made from grey cast iron, these discs are designed to withstand high levels of friction and heat generated during braking.

Key features of brake discs include:
- Use of less abrasive materials and lubricants, which can improve their lifespan and performance.
- Essential for maintaining vehicle safety and control by providing reliable stopping power.

In summary, brake discs are vital for ensuring that vehicles can slow down or come to a complete stop effectively, making them an indispensable part of any car's braking system.

Cast Iron Casting

Category: Cast Iron Casting

CI Castings available in varied shapes and sizes for industrial use.

Key Features:
- Dimensional accuracy
- Rigid construction
- High tensile strength

Technical Specifications:

Material	Grey Cast Iron

Use Cases:
- Used in chemical and cement industries for their durability and low maintenance.

Cast Iron Casting Summary:

Cast Iron Casting is a durable and versatile product made from grey cast iron, designed for various industrial applications. It comes in many shapes and sizes, making it suitable for different needs in industries like chemical and cement. The castings are engineered to offer precision and strength, ensuring they can withstand demanding environments.

Key benefits of Cast Iron Casting include:
*- **Dimensional accuracy**: Each piece is crafted to fit precisely, reducing the need for additional adjustments.*
*- **Rigid construction**: The sturdy design ensures that the castings can handle heavy loads without bending or breaking.*
*- **High tensile strength**: This means that the material can resist tension and stress, making it reliable for long-term use.*

Overall, Cast Iron Casting is an excellent choice for businesses looking for low-maintenance and long-lasting components in their operations.

Centrifugal Pump Parts

Category: Centrifugal Pump Parts

Pump body casting for industrial applications.

Key Features:
- Durable finish standards
- Resistant to wear and tear

Technical Specifications:

Material	Grey Cast Iron

Use Cases:
- Used in pump assemblies for fluid movement, requiring precision and resistance to wear.

Centrifugal Pump Parts Summary:

Centrifugal Pump Parts are essential components used in industrial pumps that help move fluids efficiently. These parts are primarily made from grey cast iron, which gives them the durability needed to withstand harsh operating conditions. The pump body casting is designed to ensure precise fluid movement and is resistant to wear and tear, making it ideal for long-term use in various applications.

Key benefits of Centrifugal Pump Parts include:
*- **Durability**: Built to last with a strong finish that resists damage over time.*
*- **Precision**: Engineered for accuracy in fluid movement, ensuring optimal performance in pump assemblies.*

Overall, these parts are crucial for any industrial setting where reliable fluid transfer is necessary.

Grates

Category: Grates

Cast Iron Grates for industrial use.

Key Features:
- Accurately dimensioned
- Durability
- High strength

Technical Specifications:

Material	Grey Cast Iron

Use Cases:
- Used in industrial settings for their strength and durability.

Grates Summary:

Grates are robust cast iron components designed for industrial use. Made from grey cast iron, these grates are specifically engineered to withstand heavy loads and harsh conditions, making them ideal for various industrial applications. Their precise dimensions ensure a perfect fit in any setup, providing reliability and stability where it's needed most.

Key benefits of using Grates include:
*- **Durability**: Built to last, these grates resist wear and tear over time.*
*- **High Strength**: Capable of supporting substantial weight without compromising performance.*
*- **Accurate Dimensions**: Ensures easy installation and compatibility with existing systems.*

Overall, Grates are an essential choice for industries that require dependable and long-lasting components for their operations.

Casting Pulley

Category: Casting Pulley

CI Pulley used in oil expeller and engineering industries.

Key Features:
- High quality
- Durability

Technical Specifications:

Material	Grey Cast Iron

Use Cases:
- Used in mechanical systems for power transmission.

Casting Pulley Summary:

The Casting Pulley is a sturdy component primarily used in the oil expeller and engineering industries. Made from high-quality grey cast iron, this pulley is designed to facilitate power transmission in various mechanical systems, ensuring efficient operation in demanding environments.

Key benefits of the Casting Pulley include:
*- **Durability**: Built to withstand heavy use, it ensures long-lasting performance.*
*- **High Quality**: Manufactured with precision, it provides reliable and consistent operation.*

In summary, the Casting Pulley is an essential part for businesses that rely on efficient power transfer in their machinery, helping to improve productivity and reduce downtime.

Flanges

Category: Flanges

Cast Iron Flanges for industrial, mechanical, and engineering applications.

Key Features:
- Customized specifications
- Endurable and long lasting
- Corrosion Resistant
- Low Maintenance

Technical Specifications:

Material	Grey Cast Iron

Use Cases:
- Used in piping systems for connecting pipes securely.

Flanges Summary:

Flanges are essential components used in industrial, mechanical, and engineering applications. Specifically made from grey cast iron, these flanges are designed to connect pipes securely within piping systems. They come with customized specifications to meet various needs, ensuring that they fit perfectly in different setups.

The benefits of using cast iron flanges include:
*- **Durability**: Built to last, they withstand harsh conditions and require minimal maintenance.*

- ***Corrosion Resistance****: They are designed to resist rust and degradation, enhancing longevity.*
- ***Versatile Application****: Ideal for various piping systems, making them a reliable choice for many industries.*

In summary, cast iron flanges provide a sturdy and dependable solution for connecting pipes while offering significant advantages in terms of maintenance and durability.

Wheel Hub

Category: Wheel Hub

Wheel hub casting for automotive applications.

Key Features:
- Sturdy construction
- Fine finishing
- Dimensional accuracy

Technical Specifications:

Material	Grey Cast Iron

Use Cases:
- Used in automotive assemblies for wheel attachment and rotation.

Wheel Hub Summary:

The Wheel Hub is a vital component used in the automotive industry, specifically designed for attaching and allowing the smooth rotation of wheels. Made from high-quality grey cast iron, this sturdy part is essential for ensuring that vehicles operate safely and efficiently.

Key benefits of the Wheel Hub include:
- ***Sturdy construction****: Built to withstand the rigorous demands of driving, providing durability and safety.*
- ***Fine finishing****: Ensures a smooth surface for optimal performance and longevity.*
- ***Dimensional accuracy****: Guarantees a perfect fit in automotive assemblies, enhancing reliability.*

In summary, the Wheel Hub plays a crucial role in the functionality of vehicles, ensuring that wheels are securely attached and can rotate freely, contributing to a safer driving experience.

Connecting Rod

Category: Connecting Rod

Compressor Connecting Rod for various industries.

Key Features:
- High tensile strength
- Resistance to corrosion
- Impeccable design

Technical Specifications:

Material	Grey Cast Iron

Use Cases:
- Used in engines for their strength and ability to withstand high stress.

Connecting Rod Summary:

The Connecting Rod is a crucial component used in various industries, particularly in engines. It serves the important role of transferring motion and force, allowing your engine to function smoothly and efficiently. Made from grey cast iron, this connecting rod is designed to endure high stress and provide reliable performance, making it a vital part of many machinery systems.

Key benefits of the Connecting Rod include:
*- **High tensile strength**: It can handle significant force without breaking.*
*- **Resistance to corrosion**: This ensures durability and longevity, even in harsh environments.*
*- **Impeccable design**: The design is optimized for efficiency, enhancing the overall performance of the engine.*

In summary, the Connecting Rod is an essential part of engine systems, ensuring they operate effectively under pressure while lasting longer due to its strong material and smart design.

Crank Castings

Category: Crank Castings

Crankshaft for various applications.

Key Features:
- High quality
- Efficient
- Rust proof

Technical Specifications:

Material	Grey Cast Iron

Use Cases:
- Used in engines for their strength and ability to withstand high stress.

Crank Castings Summary:

Crank Castings are high-quality crankshafts designed for use in various engines. Made from durable grey cast iron, these crankshafts are built to endure the demanding conditions of engine operation, providing reliable performance across multiple applications.

Key benefits of Crank Castings include:
*- **High Quality**: Manufactured to stringent standards, ensuring long-lasting durability.*
*- **Efficiency**: Optimized design that enhances engine performance and fuel efficiency.*
*- **Rust Proof**: Resistant to rust, which increases the lifespan of the component and reduces maintenance needs.*

These crankshafts are primarily used in engines due to their exceptional strength and ability to handle high stress, making them a vital component for reliable engine operation.

Valves & Pipe Fittings

Category: Valves & Pipe Fittings

Cast iron valve and CI Fitting for industrial use.

Key Features:
- Unmatched quality
- Sturdy construction

Technical Specifications:

Material	Grey Cast Iron

Use Cases:
- Used in fluid control systems for their reliability and precision.

Valves & Pipe Fittings Summary:

Valves and pipe fittings are essential components used in various industrial applications, particularly in systems that manage the flow of fluids. Made from durable grey cast iron, these products are designed to provide unmatched quality and sturdy construction, ensuring they can withstand demanding environments. They play a crucial role in fluid control systems, where reliability and precision are vital for efficient operation.

Benefits of using our valves and pipe fittings include:
*- **High Quality**: Crafted from premium materials to ensure long-lasting performance.*
*- **Robust Design**: Built to endure tough conditions, reducing the need for frequent replacements.*
*- **Reliable Performance**: Ideal for maintaining consistent fluid flow in industrial settings, enhancing overall system efficiency.*

S.G Iron Casting

Category: S.G Iron Casting

Spheroidal Graphite Iron Casting for various applications.

Key Features:
- High quality
- Efficient
- Rust proof

Technical Specifications:

Material	Grey Cast Iron

Use Cases:
- Used in applications requiring high strength and ductility.

S.G Iron Casting Summary:

S.G Iron Casting is a specialized type of casting made from spheroidal graphite iron, known for its unique properties that make it ideal for a variety of demanding applications. This material combines the benefits of strength and ductility, allowing it to perform well in situations where heavy loads and flexibility are required. The casting process ensures a high-quality finish that meets industry standards.

Key benefits of S.G Iron Casting include:
*- **High Quality**: Manufactured to precise specifications, ensuring reliability and performance.*
*- **Efficient**: Designed for optimal production, reducing waste and increasing productivity.*
*- **Rust Proof**: Its resistance to rust ensures longer-lasting components, making it suitable for various environments.*

Overall, S.G Iron Casting is a versatile solution for industries looking for durable and efficient materials that can withstand tough conditions.

Manufacturing & R&D Processes

Casting Production

Complete casting production process including sand mixing, core-making, molding, melting, and pouring.

Capacity: 4000 Kg Of Molten Metal Per Hour

Workflow / Steps:

1. Sand mixing
2. Core-making
3. Molding
4. Melting
5. Pouring

Machinery Used:

- Medium Frequency Tri-Track Induction Furnaces
- Induction Furnace 2000KW/ 750 KG Tri-Trak

Quality Control

Quality control process encompassing spectrum analysis, metallographic examination, hardness and tensile strength test.

Workflow / Steps:

1. Spectrum analysis
2. Metallographic examination
3. Hardness test
4. Tensile strength test

Machinery Used:

- Universal Testing Machine
- M.P.I Test Machine
- Vacuum Emission Spectrometer
- Rockwell Hardness Tester
- Microscope with Image Analyzer

Audience & Market

Target Buyer Personas

- OEMs
- OESs
- Automotive Engineers
- Procurement Managers
- Industrial Buyers

Target Industries

- Automotive
- Agriculture
- Construction
- Chemical Plants
- Pump
- Valve
- Manufacturing
- Pump Industries
- Valve Industries

Value Propositions (USPs)

- Sophisticated manufacturing and testing capabilities.
- Vibrant workforce with highly qualified professionals.
- Robust Quality Management System addressing ISO 9000:2015 & IATF 16949:2016.
- Customer-first approach in decision making.
- Flexibility in manufacturing to meet variable requirements.

R&D Insights & Recommendations

- Explore the integration of smart technology in brake systems, such as sensors that monitor wear and performance, which can enhance safety and attract tech-savvy customers.
- Leverage the growing demand for electric vehicle components by developing lightweight and high-performance brake discs and drums that cater to the EV market.
- Expand into the aftermarket parts sector by offering customized solutions for older vehicle models, capitalizing on the trend of vehicle longevity and repair.
- Invest in sustainable manufacturing practices and eco-friendly materials to appeal to environmentally conscious consumers and comply with increasing regulations on emissions and waste.

Marketing & Sales Strategy

Content Strategy

Platforms: LinkedIn, Instagram, YouTube

Post Types: Video, Carousel, Infographics, Case Studies

Core Themes:

- Behind the scenes manufacturing
- Product demos
- Client success stories
- Innovation in casting processes

Creative Concepts

Video - Procurement Managers

A 30s fast-paced reel showing the CNC machine cutting steel.

Highlighting precision and speed.

Carousel - OEMs

Step-by-step breakdown of our casting process.

Educating potential buyers on our meticulous production methods.

Infographics - Automotive Engineers

Comparison of material properties of different iron castings.

Showcasing the advantages of our materials.

Case Study - Industrial Buyers

Success story of a client reducing costs by 20% using our products.

Demonstrating tangible business benefits.

Competitor Landscape

Competitor	Region	Threat	Differentiator
Bharat Forge Ltd	India	High	They focus on bulk orders, we focus on customizable solutions.
Kirloskar Ferrous Industries	India	Medium	They emphasize low cost, while we prioritize product longevity.
Jayaswal Neco Industries	India	Medium	They are primarily domestic, while we have a global reach.

Competitor	Region	Threat	Differentiator
Nelcast Limited	India	Medium	Their expertise is in auto components; we cover a broader spectrum.
Simplex Castings Ltd	India	Low	They target public sector, while we focus on private enterprises.
Neenah Foundry	Global	High	Strong in North America, we excel in emerging markets.
Waupaca Foundry	Global	High	Volume manufacturer, we offer tailored solutions.
Georg Fischer Ltd	Global	Medium	Focus on piping systems, we offer diverse casting products.
Hitachi Metals, Ltd.	Global	Medium	High-tech materials, we offer cost-effective solutions.
Thyssenkrupp AG	Global	High	They are a conglomerate, we specialize in casting.

LinkedIn Outreach Playbook

50 Targeted pitch messages to convert customers, categorized by persona.

Persona: CEO

- I noticed many companies struggle with maintaining product quality during high production volumes. We solved this by implementing advanced quality control systems that ensure consistency without compromising on speed.
- I noticed that aligning production schedules with supply chain demands can be challenging. We solved this by integrating AI-driven analytics to optimize supply chain management, reducing lead times significantly.
- I noticed that keeping up with technological advancements can be daunting for some. We solved this by offering continuous training and process updates, ensuring our partners stay ahead in the market.
- I noticed that high material costs often erode profit margins. We solved this by leveraging bulk purchasing strategies and partnerships, ensuring our clients get the best materials at the most competitive prices.
- I noticed many manufacturers face downtime due to equipment failures. We solved this by investing in state-of-the-art machinery and predictive maintenance, drastically reducing operational interruptions.

Persona: CFO

- I noticed that unpredictable market fluctuations can affect financial planning. We solved this by offering fixed-price contracts, providing our partners with stability and predictability.
- I noticed that cash flow management can be a concern for manufacturing firms. We solved this by providing flexible payment terms that align with our clients' cash flow cycles.
- I noticed that many CFOs struggle to justify capital expenditures. We solved this by demonstrating clear ROI through detailed case studies and financial models.
- I noticed that currency fluctuations pose financial risks. We solved this by implementing hedging strategies that protect our clients from adverse currency movements.
- I noticed that many companies have unutilized tax benefits. We solved this by collaborating with tax advisors to maximize the available incentives for our partners.

Persona: Procurement Manager

- I noticed that sourcing reliable suppliers can be time-consuming. We solved this by building a reputation for reliability and quality, becoming a trusted partner for procurement managers.
- I noticed that managing supplier relationships can be complex. We solved this by providing dedicated account managers who ensure seamless communication and service.
- I noticed that ensuring on-time delivery is critical yet challenging. We solved this by optimizing our logistics network to ensure timely delivery, every time.
- I noticed that verifying product quality from suppliers can be difficult. We solved this by maintaining rigorous quality control protocols and offering comprehensive testing data.
- I noticed that many procurement managers face budget constraints. We solved this by offering competitive pricing models and volume discounts.

Persona: R&D Manager

- I noticed that innovation cycles in manufacturing are getting shorter. We solved this by investing in cutting-edge R&D facilities that accelerate product development.
- I noticed that prototyping can be costly and time-consuming. We solved this by offering rapid prototyping services that reduce lead times and costs.
- I noticed that material research can be a bottleneck. We solved this by collaborating with leading research institutions to stay at the forefront of material science.
- I noticed that integrating new technologies poses challenges. We solved this by providing turnkey solutions that seamlessly integrate with existing systems.
- I noticed that product testing can delay launches. We solved this by implementing advanced simulation tools that expedite the testing process.

Persona: Operations Manager

- I noticed that maintaining operational efficiency is crucial yet complex. We solved this by deploying lean manufacturing principles that streamline processes and reduce waste.
- I noticed that scaling operations while maintaining quality can be challenging. We solved this by investing in scalable manufacturing systems that ensure consistent quality.
- I noticed that managing workforce productivity can be demanding. We solved this by implementing comprehensive training programs that enhance skills and efficiency.
- I noticed that compliance with industry regulations can be daunting. We solved this by ensuring all our processes adhere to the latest standards, making compliance seamless for our partners.
- I noticed that optimizing energy consumption is essential for cost savings. We solved this by incorporating energy-efficient technologies, reducing operational costs significantly.
